

Menu Rendering

Anon

User

Admin

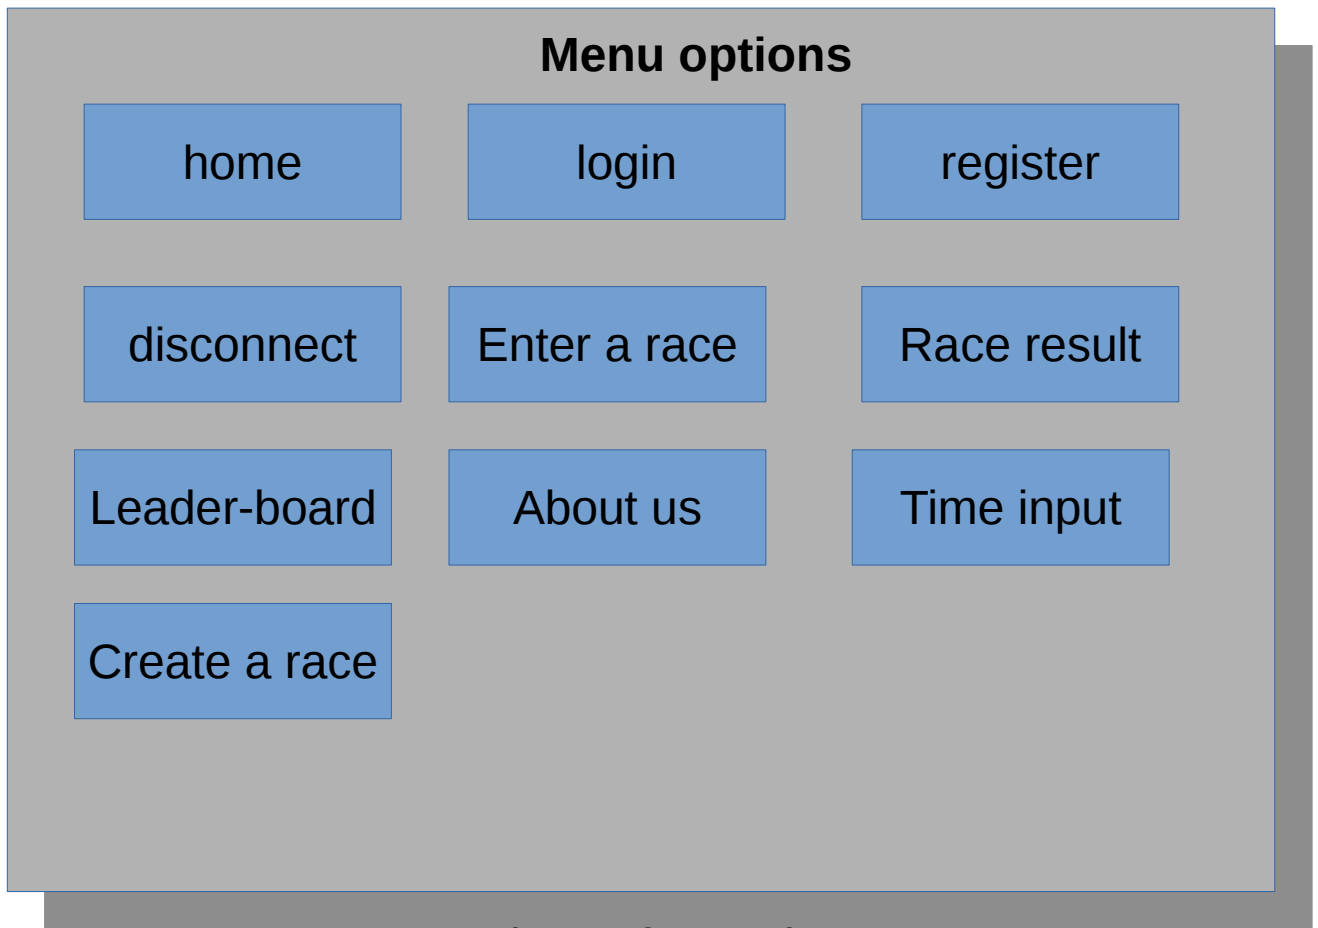

Menu need to be responsive.

The menu will change depending on the state of the user:

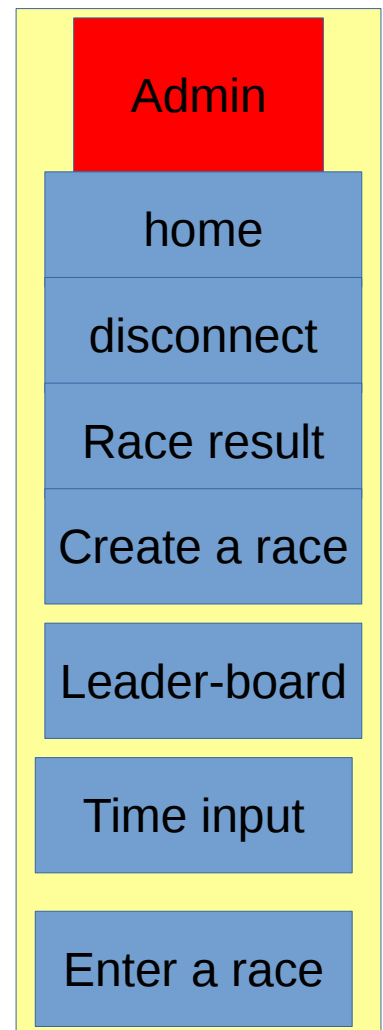

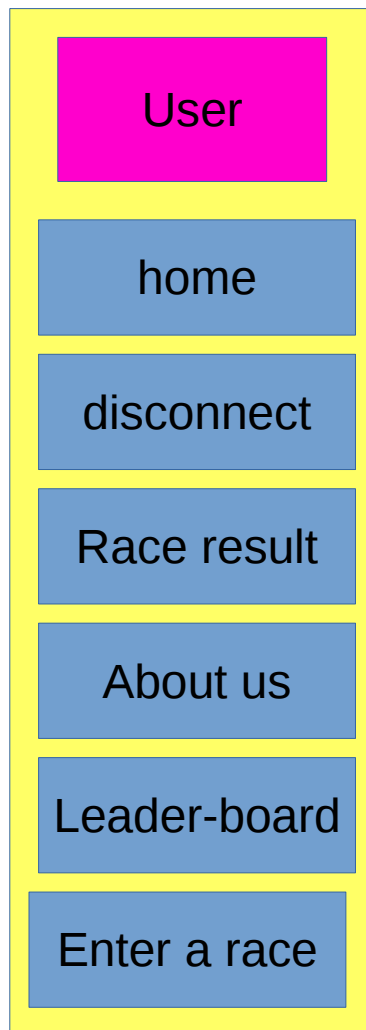

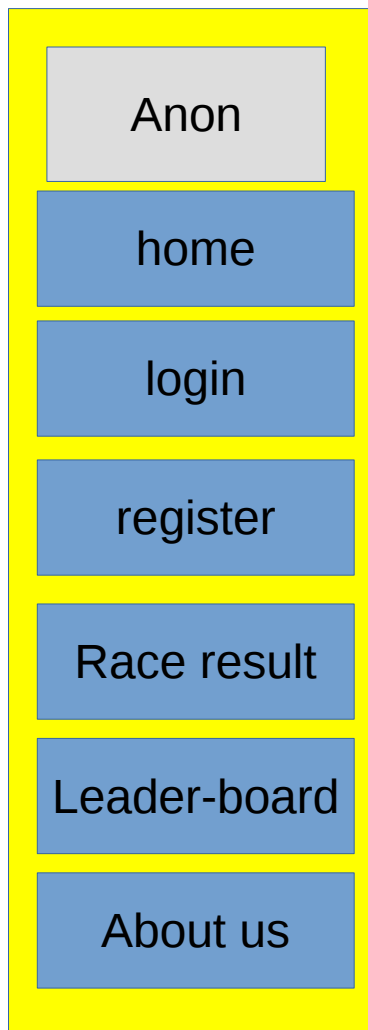

Anon can register, login, check infos about the association, check the results of the race and the overall leader-board.

User can do what Anon can do plus sign up to races.

Admin can do what the other can do plus create races and adding the times of the runners in the leader-boards.

Menu shown for each case

Two controllers will need to be called in the basemenu twig in order to display the menu based on the user profile.

Usercontroller and admin controller.

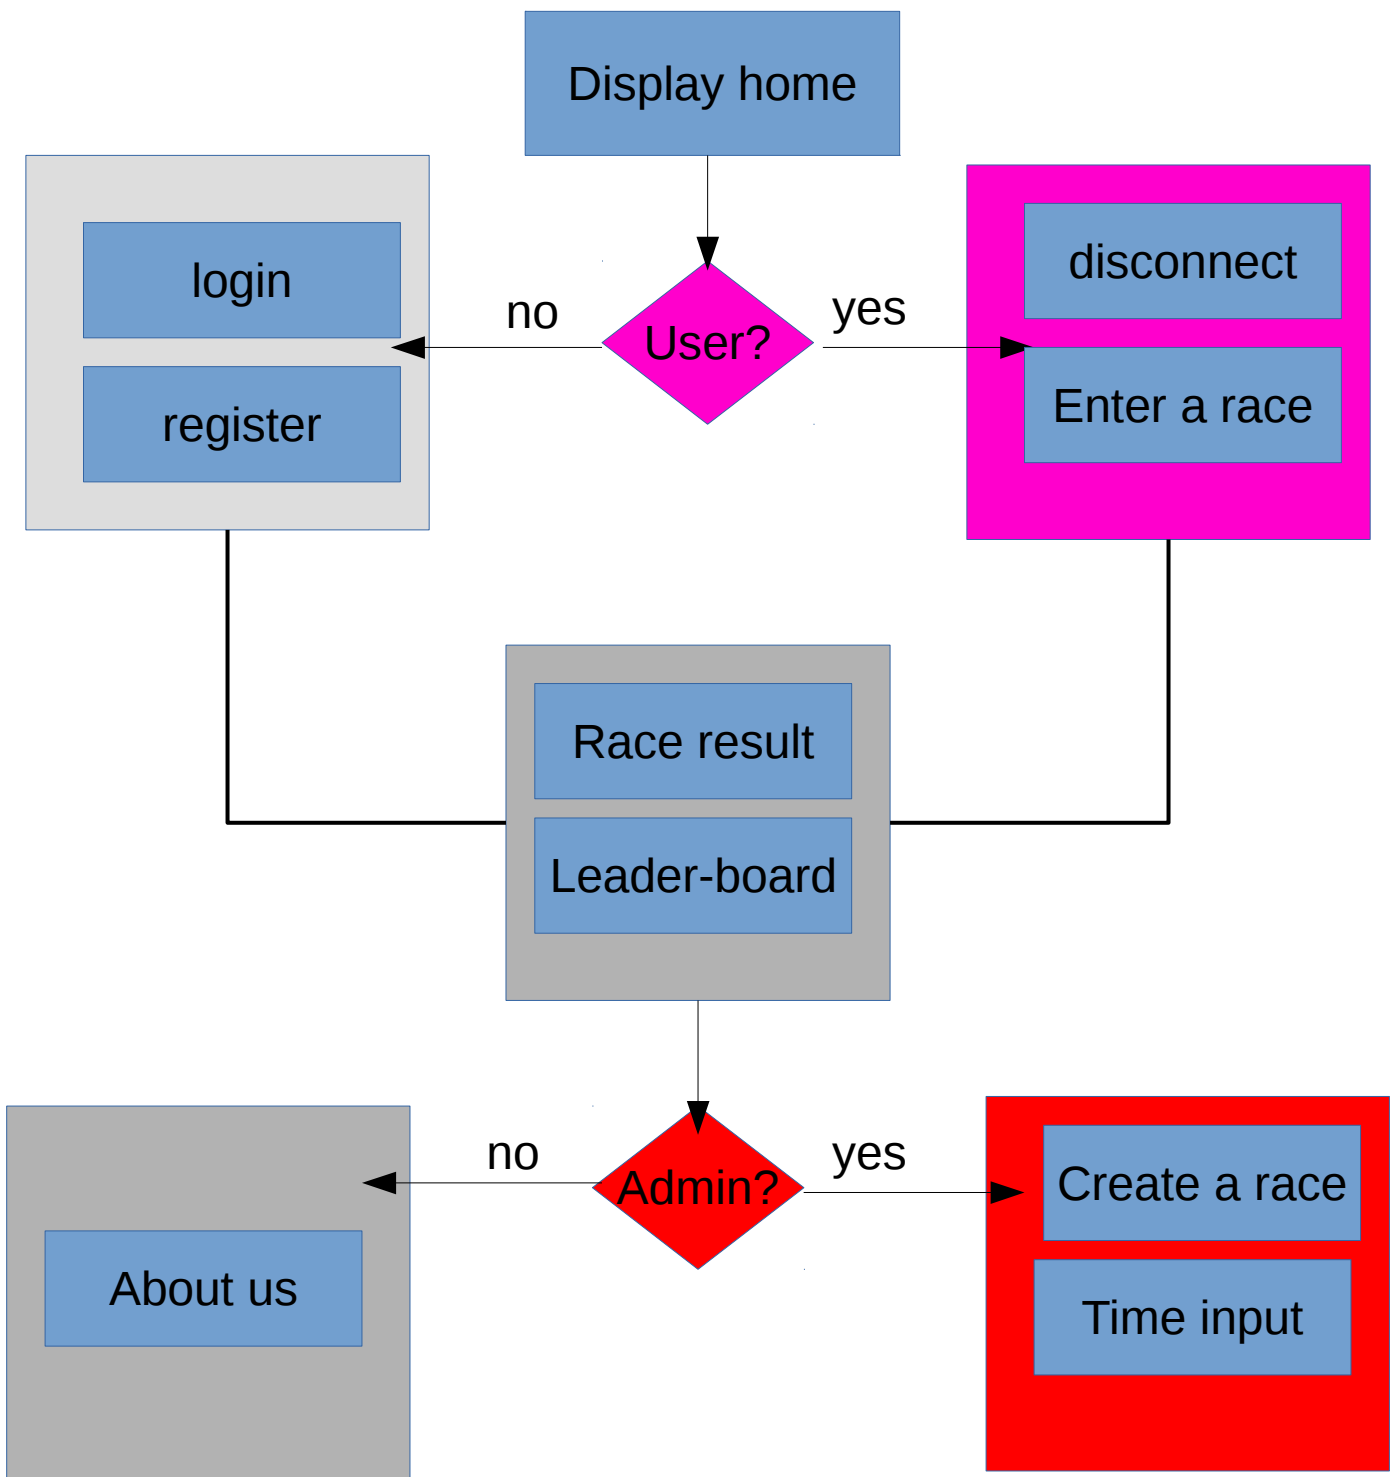

3 twig will be needed to display the menu.

Base twig

Admin twig

User twig

Display menu process

Will allow more flexibility if changing the site.
